

PRESS RELEASE

Kverneland iXflex

Hydraulic ground clearance adjustment

November 2023 Nieuw-Vennep, The Netherlands

iXflex hydraulic ground clearance adjustment for Kverneland iXdrive S6

The Kverneland iXdrive S6 self-propelled field sprayer is now available with an exciting new feature: iXflex hydraulic ground clearance adjustment. The combination of iXdrive S6 and iXflex ensures of a low centre of gravity with high speed on the road and of a high and clean chassis clearance, especially for high crop spraying applications.

Minimise crop damage

iXflex gives maximum flexibility in spraying. It is possible to spray with 1.40 metre ground clearance in low crops or on the road and switch to 1.85 metres clearance for spraying in high crops. Each wheel of the iXdrive S6 is individually suspended by an additional hydraulic cylinder within the dimensions of the lifting construction. This is on top of the well-known standard axle suspension on the sprayer.

iXflex – gives maximum flexibility in spraying

Safe on the road

Because of the lower centre of gravity the operator can drive safely, even in difficult circumstances, hilly field conditions or during high speed in transport on the road.

iXflex hydraulic ground clearance is also possible in combination with automatic track width adjustment.
