September 25, 2023, Ravenna, Italy

The innovative non-stop baling breakthrough technology from Kverneland FastBale Premium a reaches the next level

Enhanced Kverneland FastBale Premium baler-wrapper combination

Kverneland unveils FastBale Premium, an enhanced version of its famous and unique non-stop baling breakthrough baler- wrapper combination. It features higher cost-effectiveness in operation, easier-to-use solutions and an improved reworked chopping system with increased capacity and easy access to knives.

Every user expects smooth operation and high reliability during daily work. Kverneland aims to exceed the current market standard with the FastBale Premium, which offers easy service and innovative solutions to make the customer's life easier.

While the FastBale was already a significant breakthrough in baling technology with its non-stop round baling capability, the Premium version takes baling and wrapping to the next level!

With FastBale Premium, you can expect improved functional reliability in all conditions, resulting in the constant 35% higher output provided by the concept compared to standard market offerings.

In addition, the intelligent, innovative solutions are designed to maximise operational costs and boost the already high level of productivity of the baler-wrapper combination.

One of the most important updates to our product line is the improved crop-chopping device. The cutting unit now features a cassette system that allows for easy removal of the knife bank on the side of the machine, simplifying maintenance. This enhancement makes it one of the essential solutions for our customers.

The cutting device is now connected to the hydraulic load-sensing system of the machine. This enables easier knife extraction and automatic monitoring of the DropFloor position and knife cleaning cycle during baling operations.

Other enhancements, including structural upgrades, more precise wrapping, and reduced crop pollution, boost machine stability and performance. Meanwhile, several extra items, such as an upgraded pick-up roller crop press, a redesigned drawbar allowing shorter turning angles, and a more precise user interface displayed on the ISOBUS terminal, are just some of the new features which make FastBale Premium match your needs!

The machine can be equipped with optional film-on-film technology a bale-turner, and it maintains its compact size due to its unique vertical satellite wrapping technology in its double baling chamber. FastBale Premium is an easier-to-use, highly reliable, and the most productive solution the baler-wrapper combination segment has ever seen.
