

Vicon reveals new QuattroLink triple mower with 9.5m working width

Efficient solution for strong performance

20.08.2025, Nieuw-Vennep, The Netherlands

The Vicon EXTRA 495 plain mower without conditioner offers significant mower capacity with its 9.5m working width and QuattroLink suspension concept.

Vicon introduces a new addition to its triple mower lineup — EXTRA 495, a powerful, high-capacity machine built on the advanced Vicon QuattroLink suspension system. Designed to enhance productivity and deliver precise ground adaptation.

Professional specifications in compact design

The demands for maximising productivity within the harvesting system continues to grow and the new EXTRA 495 is specifically engineered to meet these demands, offering durability and efficiency for intensive use.

EXTRA 495 is designed for optimal operator comfort and high-capacity mowing with its 9.5m working width and unique Vicon QuattroLink suspension concept. Despite its compact, non-conditioner design this is a fully professional machine for demanding conditions and high workloads, offering generous working width at low weight and horsepower requirements.

Per Sørensen, Product Director, Disc Mowers says “The new EXTRA 495 is a mower that takes all the high-end specifications of our QuattroLink suspension concept into a more compact format. Specified with 9.5m working width and a professional suspension concept this mower is designed for intensive use where high output per hour is needed”.

QuattroLink suspension for accurate ground tracking

Operators will benefit from the highly responsive QuattroLink suspension concept. This is a unique Vicon feature that provides accurate ground following ability and generous working range. The 4-arm suspension concept provides the mowing unit with exceptional flexibility in

adapting to demanding ground contours. Mowing operation is flexible, with a vertical working range of 400mm upwards and 300mm downwards and a transverse adaptation range of 30°.

Full Protection when encountering obstacles in the field

The 100% NonStop BreakAway system offers protection across the full working width of the 3.6m mowing units, including the part closest to the tractor. There are no limiting factors on the inside part of the mower. When hitting an obstacle in the field, the mowing unit will instantly move backwards and up and then return to the original position.

Stable and efficient transport

EXTRA 495 folds into a safe transport position, above 90° for stable weight distribution and, importantly, to keep the mowing units away from treetops during transport. The outer guards fold hydraulically into transport position (optional), with no need to leave the tractor cab. Strong and stable parking feet for vertical parking are standard, requiring minimum space during winter storage.
