

PRESS RELEASE

New Generation Vicon Andex 725 and Andex 785 Rotary Rakes

Vicon Introduces the New Vicon Andex 725 and Andex 785 Rotary Rakes - Advanced Global Solutions for modern forage management.

25.07.2026, Kerteminde, Denmark

Vicon Andex 725

Vicon proudly presents its latest innovations: the New Generation Vicon Andex 725 and Andex 785 double-rotor rotary rakes, engineered to deliver clean forage and high operational efficiency for professional users worldwide. These New Generation rakes set new standards in forage quality, operator comfort, and productivity in demanding agricultural environments.

The Vicon Andex 725 and Vicon Andex 785 are wonderful options that strike a great balance between capacity and maneuverability. They come in sizes that can suit various needs, with working widths ranging from 6.4 to 7.2m for the Vicon Andex 725, and from 7.0 to 7.8 m for the Vicon Andex 785. These machines are designed to help you get the job done efficiently and comfortably.

This makes them ideally suited to a wide range of farming and contracting operations worldwide. Thanks to their new innovative design and the all-new TerraLink Plus ground contour-following system, these rakes perform exceptionally well in small, uneven, and hilly fields as well as in large, even ones.

Advanced Features for Professional Results

The new design features the Vicon DUO tine system with curved 9.5 mm tines that rake the crop in two rows, offering:

- Improved silage and hay quality
- Consistent tine height
- Smooth crop flow
- High raking capacity
- Reduced soil contamination

Curved tine arms further enhance crop lifting, reduce leaf loss and support the formation of airy, well-shaped swaths.

Ground adaptation is optimised by the TerraLink Plus with TouchDown Effect system, enabling precise three-dimensional contour following and clean raking results, even on challenging terrain. High headland clearance, a stable rear frame and compact transport dimensions ensure ease of use both in the field and on the road.

Designed for Reliability and Efficiency

Reliability and low operating costs are ensured by the CompactLine gearbox, which features an oil-immersed cam track and oil-greased tine-arm bearings for smooth operation and reduced maintenance. Practical details, such as easy coupling, long-lasting indicators, and a large option package to customise the unit, for example, hydraulic transport locks, support efficient and comfortable daily operation.

New Duo tines - unique performance - cleaner results!

Combining clean forage quality, high capacity, and operator-focused design, the new Vicon Analex 725 and Analex 785 rotary rakes offer a versatile and efficient solution for modern raking operations worldwide.
